Mammal Menus

Bears will eat most anything.
We call them omnivores
From roots to fish
To berries ripe,
From bugs to apple cores!

Each Squirrel needs
Some grains and seeds
And berries (without thorns)
But best of all
To eat in fall
Are lovely, brown acorns.

Opossums eat
Some plants, some meat
Some garbage or a bug,
But oh how happy
They would be
To find a snail or slug.

A skunk well knows
As dinner goes
A bug's what he'll approach,
And if this day
He has his way,
He'll find a big cockroach.

A tiny mosquito
Is like a Dorito
To bats on the wing in the night.
Each eats to 600
(In case you had wond'red
Each hour: a meal that's just right.

1. Cut this instruction strip off the paper at this line. ⟶
2. Fold paper into 8 sections—4 top, 4 bottom— and unfold.
3. Cut between the dots (or fold at center and cut both halves at once;

cut to the dot only— do NOT cut to the edge).
4. Fold paper in half longwise along the line you just cut.
5. Holding both ends, push toward the middle until there is one flap

facing forward, one facing back. You will have made an X shape.
6. Fold the four "pages" in one direction, like a book, with the title page to the
front, and flatten.
