

## How Do Seeds Spread?

*Which of these methods is/are NOT used by any plant to reproduce?*

Seeds are carried by wind.

Flowers are pollinated by insects or birds.

Seed pods explode.

Seeds spread in animal droppings.

Seeds are buried by animals.

Seeds are buried by wind or rain.

Seeds float on water.

Seeds stick to animal fur and are transported.

Runners spread underground.

Seeds are released from their seed case by fire.

Seeds are dropped by birds.

Seeds are started in nurseries and carefully planted by raccoons.

**You guessed it! Only the last one is not one of the ways that plants disperse their seeds and reproduce.**
