You are a poet!

Finish these poems about geology by filling in the blanks.

A rock is like a recipe—
More than dirt and grime.
It's minerals of many sorts,
Pushed or cooked through _____.
It may have quartz or biotite
(That flat, black, flaky stuff)
Or feldspar—a large family—
Which can be _____ or rough.
Minerals: ingredients.
So many kinds there are!
Mixed and baked until they make
A rock granola _____!

Do *you* know the three
Rock types there can be?
Igneous, sandstone, and then
The last: metamorphic
With stripes less or more thick
From squeezing again and _____.
Igneous: from
Hot _____ they come,
Earth's mantle as trickle or roar.
But sandstone starts cool
Because as a rule
It's been pressed on the ocean's deep _____.
So hot, cold, or changed
And oft rearranged,
We even can say that they roam.
Let's keep learning of them
While walking above them
For the rocks of the earth are our _____.
