FROM

Are you a mammal? How do you know?

Yes, all people are mammals. We have hair.

What do all baby mammals drink?

Baby mammals drink milk from their mothers.

What will a tadpole grow up to be?

A tadpole will become a frog or a toad.

What protects baby deer when their mothers leave them to find food?

Their coloring, called camouflage, helps them blend in with their surroundings.

Where does a toad lay her eggs?

A toad, like most other amphibians, lays her eggs in the water.

It's the big change in shape that amphibians and many insects go through as they grow up.

Yes, a caterpillar is the larval stage of a butterfly, which is an insect.

Is a caterpillar an insect?

No, baby birds have to grow long feathers before they can fly.

Can baby birds fly as soon as they hatch?

What is metamorphosis?

TO ADULT

BABY

HOW CAN

How can we help ducks?

Let them eat wild food (bread is harmful for them).

How can we help baby birds?

Protect their nests; trim trees only in autumn or winter.

Keep our garbage cans tightly covered.

How can we help opossums?

How can we help spiders?

Use less garden pesticides. Let them get rid of the insects.

Leave them alone.

How can we help injured wildlife?

Keep them warm, dark, and quiet, and bring them to Lindsay Wildlife Museum. Don't give them any food.

Cut plastic rings that hold soft drink cans; keep beaches clean.

Learn that all wildlife is important.
